EXHIBIT 1 – Crash Data (2018-2022)		
EXHIBIT 2 – Traffic Counts (November 30, 2023)		

I. EXISTING CONDITIONS

Multiple field investigations were conducted to obtain an inventory of existing roadway conditions, posted traffic controls, adjacent land uses, lane configurations of the roadways in the study area, and existing vehicular and pedestrian traffic patterns. The following is a brief description of the roadways:

The intersection of Valley Road & Mitchell Street is a four way unsignalized intersection with a stop control on the eastbound and westbound (Mitchell Street) approaches.

Valley Road is a local street under the Township of West Orange which spans 1 mile between Freeman Street and Northfield Avenue. This section of the roadway is classified as an Urban Minor Collector and is under Municipal jurisdiction per the available NJDOT Straight Line Diagram (*last inventoried February 2016*). There is no speed limit posted for this roadway. It is our opinion that a posted at 25 MPH speed limit is appropriate and conforms with the guidance set forth within the New Jersey Statutes Title 39. Valley Road provides an approximate pavement width of 30-ft and allows for bi-directional travel with one travel lane for each approach. On-street parking is permitted along both sides of the roadway south of the intersection with Mitchell Street. On street parking is prohibited along the southbound lane north of the intersection with Mitchell Street. The land use along Valley Road is generally residential in nature with neighborhood businesses at intersections.

Mitchell Street is a local street under the Township of West Orange which spans approximately 0.74 miles between Gregory Avenue and Scotland Road. There are no NJDOT Straight-Line Diagrams available for this roadway. The speed limit on this section of Mitchell Street is posted at 25 MPH. Mitchell Street provides an approximate pavement width of 30-ft and allows for bi-directional travel with one travel lane for each approach. On-street parking is permitted along both sides of the roadway. The land use along Mitchell Street is generally residential in nature with neighborhood businesses at intersections.

II. DATA COLLECTION

CRASH HISTORY DATA

BVE obtained crash data through the Township of West Orange's Police Department. We were provided with a data range from May 2018 through March 2022. These are shown in **Table 1** below:

Table 1 – Crash Data 5/18 to 3/22

DATE	STREET	CROSS STREET	TYPE	Circumstance
5/17/2018	Valley Road	Mitchell Street	Right Angle	Driver Inattention
7/12/2018	Valley Road	Mitchell Street	Side Swipe	Driver Inattention
10/18/2018	Mitchell Street	Valley Road	Right Angle	Failed to Yield
5/8/2019	Valley Road	Mitchell Street	Right Angle	Driver Inattention
8/5/2019	Mitchell Street	Valley Road	Right Angle	Failed to Yield
10/03/2019	Mitchell Street	Valley Road	Right Angle	Driver Inattention
9/1/2021	Valley Road	Mitchell Street	Left Turn / U Turn	Improper Turning
3/14/2022	Valley Road	Mitchell Street	Head On	Field to Yield
4/8/2022	Valley Road	Mitchell Street	Rear End	Driver Inattention

Based upon the crash data provided, we observe that approximately nine (9) incidents were reported in the study area between 2018 and 2022. The reported incidents are as follows: five (5) *Right Angle*, one (1) *Sideswipe*, one (1) *Left Turn / U Turn*, one (1) *Head On*, and one (1) *Rear End*. The intersection of Valley Road & Mitchell Street experienced crash frequency of approximately 2 incidents within a 12-month period. It is important to note that during the year 2020, there is a reduced frequency of crashes likely due to COVID-19 restrictions.

There are less than six (6) reported crashes in a 36-month period that are correctable by an all-way stop installation. However, there are three (3) reported "*Right Angle*" crash in a 2019. Right Angle crashes are susceptible to correction by an All-Way Stop installation. It is our opinion that an All-Way Stop may be considered at the study intersection to improve the operational characteristics of the roadway.

TRAFFIC VOLUME DATA

The traffic volume data was collected using Manual Turning Movement Counts (*MTMC*). Counts were conducted on Thursday, November 30, 2023, from 12:00AM to 11:59PM.

III. ALL-WAY STOP ANALYSIS

We performed a All-Way STOP Analysis for the intersection of Valley Road & Mitchell Street following MUTCD guidelines. We identified Valley Road as the Major Street, which has higher traffic volumes and is classified as the Urban Minor Collector, while the local Valley Road is identified as the Minor Street.

The approach speed of both the major street and minor street is 25 MPH which is less than the 40 MPH MUTCD guideline, thus the minimum vehicular warrants of at least 300 vehicles per hour for any 8 hours of an average day from the major street approach (*total of both approaches*) and at least 200 combined vehicles and pedestrian volume per hour for the same 8 hours from the minor street approach (*total of both approaches*). The volumes used for an All-Way Stop analysis is detailed in the table below:

Table 3 – Traffic Volume Analysis for Valley Road & Mitchell Street

Approach		Major	Minor	Major	Minor
Time		Valley Road	Mitchell Street	>300 MUTCD 16.1.A	>200 MUTCD 16.1.B
1	3:00PM-4:00PM	817	107	YES	NO
2	4:15PM-5:15PM	766	123	YES	NO
3	7:45AM-8:45AM	842	131	YES	NO
4	5:30PM-6:30PM	704	102	YES	NO
5	2:00PM-3:00PM	583	106	YES	NO
6	6:00AM-7:00AM	373	69	YES	NO
7	9:00AM-10:00AM	541	88	YES	NO
8	1:00PM-2:00PM	506	93	YES	NO

From this data we observe that the major approach hourly volumes do meet the hour requirements (*300 veh*), and the minor approach do not meet the hourly volume requirements (*200 veh*). Based on the MUTCD (*Section 2B.16*), an All-Way Stop control is not recommended where the minor approach does not meet the requirements.

Additionally, the existing roadway geometry and sight distance conditions at the study intersection are insufficient due to parked vehicles at the corner of the intersection and other objects that obstruct the view. We also observed that the two streets are of similar design and operating characteristics where an All-Way Stop control would improve the safety and operation of the intersection. Based upon these other criteria, we recommend that an All-Way Stop be implemented at the intersection of Valley Road & Mitchell Street. It is our opinion that this is appropriate based upon the existing sight distance limitations, conflicting traffic, and pedestrian safety. Our recommendations are based upon the guidance presented within section 2B.14 of the MUTCD which are outlined on the following page.

We utilized the following criteria in evaluating the study location for the application of an All-Way STOP treatment. Based upon MUTCD, Section 2B.12-17, All-Way Stop Control, the following justification is provided:

Section 2B.12 All-Way Stop Control

Support:

01 The provisions in the following sections describe warrants for the recommended engineering study to determine all-way stop control. Warrants are not a substitute for engineering judgment. The fact that a warrant for a particular traffic control device is met is not conclusive justification to install or not install all-way stop control. Because each intersection will have unique characteristics that affect its operational performance or safety, it is the engineering study for a given intersection that is ultimately the basis for a decision to install or not install all-way stop control.

02 All-way stop controls at intersections with substantially differing approach volumes can reduce the effectiveness of these devices for all roadway users.

Guidance:

03 The decision to establish all-way stop control at an unsignalized intersection should be based on an engineering study. The engineering study for all-way stop control should include an analysis of factors related to the existing operation and safety at the intersection, the potential to improve these conditions, and the applicable factors contained in the following all-way stop control warrants:

A. All-Way Stop Control Warrant A: Crash Experience (see Section 2B.13)

B. All-Way Stop Control Warrant B: Sight Distance (see Section 2B.14)

C. All-Way Stop Control Warrant C: Transition to Signal Control or Transition to Yield Control at a Circular Intersection (see Section 2B.15)

D. All-Way Stop Control Warrant D: 8-Hour Volume (Vehicles, Pedestrians, Bicycles) (see Section 2B.16)

E. All-Way Stop Control Warrant E: Other Factors (see Section 2B.17)

Option:

04 The decision to install all-way stop control on site roadways open to public travel may be based on engineering judgment.

Standard:

05 The satisfaction of an all-way stop control warrant or warrants shall not in itself require the installation of all-way stop control at an unsignalized intersection.

Section 2B.13 All-Way Stop Control Warrant A: Crash Experience

Option:

01 All-way stop control may be installed at an intersection where an engineering study indicates that:

A. For a four-leg intersection, there are five or more reported crashes in a 12-month period or six or more reported crashes in a 36-month period that were of a type susceptible to correction by the installation of all-way stop control.

B. For a three-leg intersection, there are four or more reported crashes in a 12-month period or five or more reported crashes in a 36-month period that were of a type susceptible to correction by the installation of all-way stop control.

Section 2B.14 All-Way Stop Control Warrant B: Sight Distance

Option:

01 All-way stop control may be installed at an intersection where an engineering study indicates that sight distance on the minor-road approaches controlled by a STOP sign is not adequate for a vehicle to turn onto or cross the major (uncontrolled) road.

Support:

02 At such a location, a road user, after stopping, cannot see conflicting traffic and is not able to negotiate the intersection unless conflicting cross traffic is also required to stop.

Section 2B.15 All-Way Stop Control Warrant C: Transition to Signal Control or Transition to Yield Control at a Circular Intersection

Option:

01 All-way stop control may be installed at locations where all-way stop control is an interim measure that can be installed to control traffic while arrangements are being made for the installation of a traffic control signal (see Chapter 4C) at the intersection or for the installation of yield control at a circular intersection.

Section 2B.16 All-Way Stop Control Warrant D: 8-Hour Volume (Vehicles, Pedestrians, Bicycles)

Option:

- 01 All-way stop control may be installed at an intersection where an engineering study indicates:
- A. The combined motor vehicle, bicycle, and pedestrian volume entering the intersection from the major street approaches is at least 300 units per hour for each of any 8 hours of a typical day; and
 - B. The combined motor vehicle, bicycle, and pedestrian volume entering the intersection from the minor street approaches is at least 200 units per hour for each of any of the same 8 hours.
- 02 If the 85th-percentile approach speed of the major-street traffic exceeds 40 mph, the minimum vehicular volume warrants may be reduced to 70 percent of the values given in Items A and B in Paragraph 1 of this Section.

Section 2B.17 All-Way Stop Control Warrant E: Other Factors

Option:

- 01 All-way stop control may be installed at an intersection where an engineering study indicates that all-way stop control is needed due to other factors not addressed in the other all-way stop control warrants. Such other factors may include, but are not limited to, the following:
- A. The need to control left-turn conflicts,
 - B. An intersection of two residential neighborhood collector (through) streets of similar design and operating characteristics where all-way stop control would improve traffic operational characteristics of the intersection, or
 - C. Where pedestrian and/or bicyclist movements support the installation of all-way stop control.

IV. SUMMARY & CONCLUSIONS

BVE has concluded that an All-Way Stop condition at this intersection is justified based on Section 2B.14, All-Way Stop Control Warrant B: Sight Distance, of the 2023 MUTCD.

It is our recommendation that the Township of West Orange consider traffic calming measures and work with its residents to improve the safety and operational characteristics at the intersection of Valley Road & Mitchell Street. Based upon our observations, it is our opinion that the study intersection warrants based on sight distance for the implementation of an All-Way STOP Control based on the guidelines within the MUTCD. We present the following in support of this recommendation as well as other traffic treatments which may be considered:

- The crash data presented did not meet the requirements set forth within the MUTCD for an All-Way STOP Control (*6 correctable incidents within a 36-month period*); however, 56% of the crashes reported were “*Right Angle*” crashes which are susceptible to correction by an All-Way Stop installation.
- Based on the sight distance conditions observed at the intersection, it is our opinion that these conditions present a safety concern for both vehicles and pedestrians. This meets the requirements set forth within the optional guidance presented within MUTCD for considering the implementation of an All-Way STOP control (*2B.14–01,02*).
- The Township may wish to consider striping parking aisles where the roadway segment with permits to better define the travel lane width. By defining a narrower travel lane width, motorists are inclined to travel at lower speeds.
- It is our recommendation that the Township consider implementing an international crosswalk pattern throughout all of its pedestrian crossings. This striping pattern should be comprised of white 24” thick bars, set 4’ on center, and no less than 6’ wide. This pattern provides greater visibility for both pedestrians and motorists who approach the study intersection, greater painted surface area provides greater reflectivity during nighttime lighting conditions, and due to how the pattern is laid out it may require less upkeep costs for the Township due to reduced wear and tear.
- We recommend that the Township of West Orange provide additional speed limit signs with driver feedback throughout Valley Road & Mitchell Street.
- We recommend additional improvements such as replacing older and faded signs, refreshing pavement striping and markings, ensuring curb ramps are ADA compliant, enhancing the landscape of the streets by maintaining the green spaces, the sidewalks, and installing additional lighting, where appropriate.

- We recommend that the Township of West Orange work with property owners in the study area to improve sight distance at the intersection and clear obstructions with the sight triangles, as much as is reasonable.
- There is a sufficient amount of foot traffic in this neighborhood, it is our opinion that an All-Way Stop would improve the safety and traffic operational characteristics of the intersection.
